WHAT IS CLAIMED:

1.   A method comprising:

receiving a request corresponding to a specific content;

reviewing a record associated with the specific content in response

to the request;

selectively transmitting a confirmation for the request based on the

reviewing; and

performing the request based on receiving the confirmation.

2.   The method according to Claim 1 wherein the reviewing further comprises

using a preference corresponding with the request to determine whether the

confirmation is utilized.

3.   The method according to Claim 2 wherein the preference includes a

criteria for checking the record wherein the criteria is based on the request.

4.   The method according to Claim 1 wherein the reviewing further comprises

reviewing a second record associated with a second content.

5.   The method according to Claim 1 wherein the specific content includes

one of a photograph, music, a document, and a video.

6.   The method according to Claim 1 wherein the request includes one of saving the specific content, deleting the specific content, modifying the specific content, and printing the specific content.

5   7.   The method according to Claim 1 further comprising storing the preference in a storage device.

8.   The method according to Claim 1 further comprising storing the record in a storage device.

10

9.   The method according to Claim 1 wherein the confirmation asks for authorization for the request.

10.   A system comprising:

15   means for receiving a request corresponding to a specific content;

means for reviewing a record associated with the specific content in response to the request;

means for selectively transmitting a confirmation for the request based on the reviewing; and

20   means for performing the request based on receiving the confirmation.

11.   A method comprising:

detecting new content;

comparing the new content with existing content;

forming a new record having at least one field representing the new

5   content;

automatically completing the field based on the comparing; and

storing the record within the storage module.

12.   The method according to Claim 11 wherein the new content includes one

10   of a photograph, music, a document, and a video.

13.   The method according to Claim 11 wherein the field includes one of a

content title field, a file size field, a file description field, a related content field, a

location content field, and a date saved field.

15

14.   The method according to Claim 11 further comprising updating existing

records associated with the existing content based on the new record.

15.   The method according to Claim 14 wherein the updating further comprises

20   reviewing the field within the new record for related content.

16.   A system comprising:

means for detecting new content;

means for comparing the new content with existing content;

means for forming a new record having at least one field representing the new content;

means for automatically completing the field based on the

5 comparing; and

means for storing the record within the storage module.

17. A system, comprising:

an interface module configured for receiving a request specifying

10 content;

a storage module configured for storing a preference wherein the preference corresponds to the request and includes at least one criteria for performing the request; and

a review module configured for analyzing the content and a

15 corresponding record in light of the request and the preference and determining whether the request is performed.

18. The system according to Claim 17 further comprising a capture module configured to identify the content.

20

19. The system according to Claim 17 wherein the content includes one of a photograph, music, a document, and a video.

20.   The system according to Claim 17 wherein the interface module is configured to provide a confirmation the content fails the criteria for performing the request.

5   21.   The system according to Claim 17 wherein the storage module is configured to store the record.

22.   The system according to Claim 17 wherein the storage module is configured to store the content.

10

23.   The system according to Claim 17 wherein the request includes one of saving the content, deleting the content, modifying the content, and printing the content.

15   24.   A computer-readable medium having computer executable instructions for performing a method comprising:

receiving a request corresponding to a specific content;

reviewing a record associated with the specific content in response to the request;

20   selectively transmitting a confirmation for the request based on the reviewing; and

performing the request based on receiving the confirmation.
